

One Heart Care

One Place. Your Heart. Total Care.

Cardiovascular Technologist

Title: Cardiovascular Technologist

Reports to: Senior Cardiovascular Technologist

Position Summary:

Reporting to the Senior Cardiovascular Technologist, the Cardiovascular Technologist role is an important position within the One Heart Care Clinic. You are able to work collaboratively and independently within a multidisciplinary team. One Heart Care prides itself on providing a professional, pleasant, and courteous environment when attending to patients and visitors.

Qualifications

Education and Training:

1. Current C.S.C.T. registration and CME required
2. Minimum 1 year job-related experience
3. Current CPR certification

Diagnostic Skills:

- Supports physicians in diagnosing and treating cardiac and peripheral vascular ailments.
- Detects irregularities while monitoring all cardiac tests and reports to attending physicians immediately.
- Conducts all cardiac diagnostic tests according to OHC protocols including ECG, ABP, Holter monitoring, Stress testing and Nuclear Exercise Stress test and Stress Echoes.
- Administration of Persantine medication during Persantine Stress testing.
- Works collaboratively with Nuclear Medicine Technologists and team members.
- Ability to work with patients injected with radioactivity and understand the principles of the Support Staff Radiation Safety Training.
- Willing to be classified if exposure limits warrant it as a designated Nuclear Energy Worker (NEW)

Other Responsibilities:

- Maintains throughout the One Heart Care an awareness of the primacy of the patient in relation to all facility activities.
- Dealing with complexities while doing tests.
- Documents patient's test results, by completing patient records, forms, reports, logs, and other forms. Aids patients in filling out Patient History Forms and Consent Forms.
- Maintains required departmental records. Corrects delinquent medical records.
- Maintains equipment, follow operating instructions; report any hazardous or potentially dangerous conditions; troubleshooting problems; calibrating equipment.
- Following preventive maintenance procedures and calling for repairs.

One Heart Care fosters a culture of patient and employee safety whereby all team members are guided by One Heart Care's Mission, Vision, Values and Code of Conduct.
